can then be removed. This prevents cancer! Screening also helps to find cervical cancer early when it may be easier to treat. The second tool is the human papillomavirus (HPV) vaccine. HPV causes nearly all cases of cervical cancer and several other cancers. The HPV vaccine prevents about 90% of HPV-related cancers. The HPV vaccine is recommended for children starting at age 9 and young adults through age 26. If you have a cervix, start screening at age 21 and get screened every three years until age 65. Talk to your doctor after age 65 to see if you should still be screened. While the HPV vaccine is very effective in preventing cervical
